

SANAIR BENEFITS & FUNCTION

sanair®

Our **Sanair Sanitiser** is revolutionary! The Sanair dispenses an aromatic cleansing & deodorising fluid through a nozzle as a diffusion spray.

Some of the fluid also coats an incline tray in the dispenser which has an adsorbent, chevron-channeled surface, providing gradual vaporisation. The remaining fluid is transferred into an absorbent wall in the form of a wick, which allows for further vaporisation via air from a convection chamber above and below the wall. Excess fluid is transferred to two drainage outlets located on a lower tray and these can be connected to toilet and urinal inlets.

Fresh Fragrances in the Air

With five unique fragrances available, the washroom smells clean, fresh and - most of all - inviting. A fresh washroom demonstrates that care is taken with the health and hygiene of the facility and its patrons.

Sanair Consistently Freshens

Sanair consistently keeps your washroom smelling fresh, saving on maintenance staff and the uncontrolled cost of cleaning products.

Hygienic Surfaces

Every flush produces a concentrated and fragrant foam, eliminating germs and reducing surface stains and deposits in the urinal porcelain micro-pores.

Automatic Dispenser

Sanair dispenser doses a hygienic formulation that automatically and continuously flows through the urinals and pipes. Bacteria is created every 20 minutes, the Sanair formulation eliminates this bacteria 24 hours per day, 365 days a year.

Free Pipelines

Sanair formulations attack and dissolve deposits, which clog and block internal pipes and pipelines; this is the main cause and source of offensive washroom odours.
